Dear Rob,

Reopened envelope to ship this
in with the Mock item.

I have a good way of explaining
the Big Lie of the Malthusian theory:

Many vegetables from seed mature
in four months. In 1982 in my yard
from one seed of a banana squash, I
got 15 fifteen squashes. Each weighed
over 16 pounds (SIXTEEN POUNDS)
Chicken Eggs hatch in 21 days. At end
of six months chicks are full grown
and start laying eggs too.

How long does it take for a baby
to be born? Nine months?
Doesn't it take another 3 months

for the child to start seeing roles?
I usually explain the pre-ethnographic
theory. First people don't know it.

With I were there!

Robert Sage

P.S: Note the enclosed sheets are
numbered page 1 etc. I don't
know how many are mailed to
individuals over the years of the
first 3 sheets. The others were
added later.
